

## Earthing and short-circuiting device with new safety feature

Horstmann's high-quality earthing and short-circuiting devices have been complemented by two additional aspects in the series:

1. In each junction element of an earthing and short-circuiting device, there is a temperature sensing point which irreversibly changes color at high short-circuit currents.
2. A QR code in the junction element allows the digital version of the user manual to be accessed at any time via smartphone.

### Your advantages at a glance:

- ▶ Integrated temperature sensing point signals unacceptable temperature exceedance – Enhanced user safety and optional aid for the mandatory visual inspection
- ▶ QR code in the junction element – Quick and easy access to the digital user manual
- ▶ Designs based on cable length, short-circuit current values, various phase and earthing fixed points and number of phases - Customised designs upon request
