

Horstmann's high-quality earthing and short-circuiting devices have been complemented by two additional aspects in the series:

- 1. In each junction element of an earthing and short-circuiting device, there is a temperature sensing point which irreversibly changes color at high short-circuit currents.
- 2. A QR code in the junction element allows the digital version of the user manual to be accessed at any time via smartphone.

Your advantages at a glance:

- ► Integrated temperature sensing point signals unacceptable temperature exceedance Enhanced user safety and optional aid for the mandatory visual inspection
- QR code in the junction element Quick and easy access to the digital user manual
- ▶ Designs based on cable length, short-circuit current values, various phase and earthing fixed points and number of phases Customised designs upon request
